

▶▶ About US

Our vision is to be one of the preferred providers of quality professional education, attracting local and overseas students, and imbibe in our students a passion for the life-long learning by freely sharing the fruits of knowledge to create a win-win situation for all the stakeholders in significant research projects with industry. RTU offers the most comprehensive range of job-oriented programs, providing students with more opportunities to develop general or specialized expertise. The aim is to provide students with sound knowledge of scientific, technological, management, economic, environmental and social principles. Holistic Education = Theory + Practice + "Capacity to Think" ... Flexibility, Creativity, Innovation

Commitment to Excellence – Pedagogy

The traditional mode of learning perpetrates memorizing, without the student ever grasping the soul of the subject. This results in situation where lessons taught are never learnt.

At RTU, students are sensitized to unique learning process which continues to pay dividends throughout their lives. The 'Rai Method' demands constant interaction between faculty and students.

Our focus is to develop conceptual understanding via active learning, interactive classes, self-learning, pre-class reading and problem-solving.

Lecture in the interactive mode, through uploading study material on the university website, persuade students to come prepared, ask concept-related pre-planned questions, trigger group discussions, focus on peer teaching (question pairs) and quiz oral tests.
